PROFESSIONAL SUMMARY

I am the owner of my own record label dedicated to publishing futuristic, eerie, thematic, cinematic, techno: Space Pop | *Crystalline* Dream

I have published 4 albums so far since my start with Suno.com Premier.

EMPLOYMENT

AI Musician & Programmer, Lyricist,
Singer, Synth Instrument Creator

Space Pop |
Crystalline
Dream

📍 Peoria, Illinois 📅 May 2026 - Present

- I currently use Suno.com Premier & have created about 300 amazing original music productions, some including lyrics which I have written, & some including lyrics which Suno has written. I have created my own genre with very specific detailing for the music which I created in order to publish singles & albums to Spotify & Apple, as well as other music streaming services via my chosen distributor.
- I have my own record label, Space Pop | *Crystalline* Dream, which I created & dedicated to distributing my own personal unique music in the genre I was inspired to create, which is focused on a futuristic techno sound with arias, romantic but eerie themes, crystalline synths, & new synth musical instrument styles & themes.
- I have published 3 albums officially in stores: "Veil of Thorns;" "2125;" & "4K Meditation." I have published one free album, "Crystalline Dreams," which is available for free listening & download on my personal portfolio website & my WhatsApp Chat Group.
- I sometimes record samples of my singing my lyrics, then I upload them into my Suno.com Premier workstation to further program the style of my singing voice to go along with the lyrics I have written.
- I have always successfully created entirely new synth instruments, such as: an electric recorder synth, an electric flute synth, & and electric grand piano & electric guitar hybrid synth instrument; an all new synth hybrid instrument combining a traditional pipe organ with a newly invented electronic synth instrument for a completely new sound; & more.

- I am capable of creating captivating, cinematic themes, as well as unique metal, extremely pleasant, futuristic techno & electro, including entirely newly created sometimes hybrid genres of music including a new style of reggaeton & easy-listening electro, & more.
 - I have successfully invented a completely new genre of music using Suno.com Premier called future cybergalactic; & several other completely new genres.
 - I use two different custom created mods to program music which is specific for my record label & songs which are important to me & my artistic goals; in the future, I can create as many custom mods as I need in order to advance the music production & demos generated for the purposes given.
 - I sometimes incorporate traditional instruments such as the cittern, violin, & some traditional ancient Asian musical instruments, as well as glockenspiel, woodwinds, & others. I usually attempt to incorporate traditional music theory techniques to achieve certain melodies & scaling.
-
